Panutda Wongsa

Junior UX/UI Designer | Frontend Developer

080-069-1626 | panutdawongsa@gmail.com

SUMMARY

Junior UX/UI Designer and Frontend Developer with 2+ years of hands-on experience at Kitmeechai Electric (KMCE), a smart-energy and EV-charging company. I design in Figma and build what I design with React, Angular and JavaScript, turning complex real-time IoT data into dashboards and web pages that non-technical users can read quickly. Comfortable working with engineers, from wireframes to production code.

WORK EXPERIENCE

Technology Development Assistant (UX/UI & Frontend) — Kitmeechai Electric Co., Ltd. (KMCE) · 2024 – Present

- Designed new features for an existing mobile app in Figma (device sharing via QR code with Can Control / Can View permissions) and handed them to developers to build.
- Designed the pages and features of a real-time Angular monitoring dashboard (MQTT) and contributed code alongside the lead developer.
- Designed and built the KIT-WISe company website (React): solutions, project showcase with category filters, awards and contact sections, responsive on mobile and desktop.
- Built Node-RED flows for device-status and fault notifications (online/offline and error alerts to Discord and LINE) used by the operations team.
- Produced marketing materials (brochures, product stickers, brand assets) in Photoshop and Canva, keeping a consistent visual identity across product and print.
- Worked closely with hardware and software engineers to ship user-friendly, visually consistent solutions.

Frontend / UI Intern — KMCE · 2023 – 2024

- Designed UI components and supported frontend development; created visual assets and assisted with marketing design.

SELECTED PROJECTS

Smart IoT Dashboard — Angular, MQTT, Figma. Designed the web pages and features of a real-time monitoring dashboard and contributed code alongside the lead developer. Shows which device, where, what error occurred and how to fix it, so operators can act faster. Used by engineers and back-office admins to monitor 100+ devices across 10+ stations.

Device Sharing Feature (Mobile App) — Figma. Add-on feature for an existing app, requested by my lead: Settings entry, shared-user list, Can Control / Can View choice and a time-limited QR code. Handed off to developers.

KIT-WISe Company Website — React, responsive CSS. Filterable project gallery, awards showcase and LINE contact entry point. Live: kit-wi-se-energy.vercel.app

Device Alert Automation — Node-RED, MQTT. Automated fault and offline alerts for IoT devices across multiple projects, replacing manual checking.

SKILLS

UX/UI Design: Wireframing, Prototyping, User Flow, Design Systems, Component Design, Layout, Typography, Visual Hierarchy
Frontend: HTML, CSS, JavaScript (ES6+), React, Angular, Responsive Web Design, Git/GitHub
Integration & IoT: MQTT, Node-RED, real-time data visualization
Graphic Design: Photoshop, Canva, Branding, Marketing Materials
Tools: Figma, Canva, Photoshop, Google Stitch; AI-assisted workflow (ChatGPT, Gemini, Claude)

EDUCATION

B.Sc. Computer Science — Rajamangala University of Technology Krungthep (RMUTK) · Graduated 2024

Certification: UX/UI Specialization (Introduction, Empathize, Wireframes) — mydemy & NocNoc
